## Pre-College Summer Program

July 9 – August 3, 2007

# imagine

**A Professional College of Art & Design**

Imagine spending a month this summer doing, breathing, discussing and making art. You'll explore new ideas with other high school students from around the country, and learn new techniques from a distinguished group of faculty, all in a small, lively, colorful town in Boston's beautiful North Shore.

**About the Pre-College Summer Program**

The Pre-College Program is intensive and rigorous (but also fun and exciting). It will help you evaluate a career in the visual arts and develop a portfolio for college admission. You'll participate in assignments and critiques led by top instructors - all working artists who understand you and your creativity. You'll develop a strong foundation of skills, and discover new ways of seeing the world and yourself.

The program is for students entering their junior or senior year of high school, with a high level of commitment and ability of initiative. Most Pre-College students are considering if art college is in their future. **Four weeks of study at Montserrat can help answer that question.**

To ensure that each student receives a high level of personal attention, a **limited number of students are accepted.** The application deadline is **June 14, 2007.** Find out more on the website [www.montserrat.edu](http://www.montserrat.edu).

**Courses for Credit**

- Foundation Drawing
- Sculpture
- Photography
- Painting
- Printmaking
- Mixed Media
- Illustration
- Computer Art & Design

Art changes everything.

Microsoft Services

## Microsoft QuickStart for Collaboration

Microsoft® QuickStart is a great way to determine if Microsoft technology solutions can help your organization meet its business goals. The Microsoft QuickStart for Collaboration is designed to provide you with expert technical advice, delivered through a series of tightly focused strategy and technical sessions tailored to your specific business needs.

Businesses looking to unlock the value of knowledge stored with their people and networks should consider QuickStart for Collaboration.

**Overview**

Today's organizations are striving to connect employees, business partners, and customers — with each other and to critical business information. They are seeking to enable a mobile workforce and provide access to electronic email, anytime, and on any device. Technologies for real-time communications — such as instant messaging, Web conferencing, and collaboration — are the means to foster improved communications.

Microsoft Services provides a proven approach for implementing integrated communications that leverages your investment in Microsoft Exchange, Office Live, and the Windows® Platform. Solutions developed are directly related to the business results you need. Key benefits include:

- **Improved response to business change:** Growth and consolidation create the need for disparate strategies.
- **Enriched collaboration internally and externally:** Customers and partners demand high levels of service. Employees need better business intelligence through access to isolated data and processes.
- **Increased workforce productivity:** Employees need to manage "information overload," share best practices across departments, and quickly resolve roadblocks within organizational processes.
- **Rapid Return on Investment (ROI):** You need to build your investment will have faster impact on your business.

**Strategy Briefing**

This one day briefing provides your key business decision makers with an overview of Microsoft technologies related to enhancing integrated communications and collaboration across your organization.

**We examine your company's business objectives, current IT environment, and communication needs to deliver a clear picture of how Microsoft solutions can help you achieve your business goals. Topics covered include Exchange 2003, availability, performance, mobility, migration, Office Live extensible architecture, enterprise integration, management, monitoring, and development. Office Live Meeting and Windows Media® Services are also introduced.**

**Architecture Design Session**

During this two day session, we deliver in-depth technical information to your key technical decision makers. We work together to determine how the environment would fit into your existing technologies will help you meet your business goals. The session can include:

- Architecture design
- Active Directory®
- Deployment planning
- Mobility
- Management and monitoring
- Security
- Development features

**Proof of Concept**

In this in-depth workshop, our delivery team works closely with your technical staff to review techniques for migrating Lotus Notes applications to the Microsoft platform. Areas of focus can include:

- Rich client or Web development
- Needs analysis and mappings to the Microsoft platform
- Migration tools including the Application Analyzer and CASAH, Technology Inc's
- Test configuration set up
- Proof of concept solution development

# RasterPlus

## Performance Software For Your Printer

Windows Edition

Macintosh Edition

RasterPlus is so fast that many jobs can be processed while printing, for speed that is up to 10 times faster than the competition.

Speed isn't everything if the results are not what you expect! RasterPlus uses an optimized processing system that prints color blends at the target device resolution for smooth gradations between colors. Lower duty factor and lines are common with RasterPlus because of proprietary halftone and on-the-fly techniques. You can easily take advantage of the highest resolution graphics with RasterPlus to print special PostScript-only patches elements like embedded EPS files and PfaScript fills. Simply select the RasterPlus printer from your application of choice and take full advantage of PostScript 3 for the very best output.

**For Macintosh and Windows:**

Available on both the Macintosh and Windows platforms - the choice is yours. The Macintosh Edition is ideal for imaging professionals who need the best print software for the Macintosh OS. The Windows Edition is similar in operation but also includes full networking to all Windows and Macintosh client computers.

### Macintosh Edition Summary

RasterPlus Macintosh Edition is designed to dramatically improve the print performance of color film recorders and photorealistic printers. The software is ideal for professional service bureaus, corporate imaging centers and desktop presenters who demand the most powerful print solution available for the Macintosh operating system.

RasterPlus provides full-time File-Print access from any Macintosh application even when RasterPlus isn't running! This integrated workflow makes RasterPlus the easiest software to use, maximizing print performance. You get accurate print previews, print editing, unattended schedule printing, hot folder networking and PostScript 3 quality output.

### New Visual Print Workflow

RasterPlus Macintosh Edition has an all new Visual Print workflow which allows customers to track the status of all the jobs in the queue at a glance. With the 3-step visual print workflow, incoming files are placed in a Hold area where they can be previewed. RasterPlus features a true WYSIWYG high definition preview for a pixel-by-pixel view of your output before it is printed.

Once the files are approved, they are sent to the print engine that quickly renders the files to the device resolution. After printing, all files are collected in an Archive for future reference. Files can be dragged between panes to be reprinted, or dragged within the pane to change the order of the files in the queue.

### New Multiple Queue Features

RasterPlus Macintosh Edition can support up to eight queues. Select multiple queues for the same device, or use RasterPlus with multiple devices. Each queue has independent preferences and options, so you can set up each queue for a particular type of job. The appropriate job properties are then automatically applied to every file in the queue.

Multiple workflow improvement have been made to increase productivity and save you valuable time. Not only can multiple queues be created, but all queues, queue preferences and settings are automatically saved when the queue is de-activated or when RasterPlus is closed. When RasterPlus is opened, the queues are ready to go. There's no need to create new queues each time jobs are processed.

| 4.5. (Gloss) 10, (Gloss) 10, (Gloss) 10, (Gloss) 10, (Gloss) 10, (Gloss) 10 | RPM-FJ2     |
| 4.5. (Gloss) 10, (Gloss) 10, (Gloss) 10, (Gloss) 10, (Gloss) 10, (Gloss) 10 | RPM-FJ2     |

### Requirements:

40 MB RAM Memory and 15 MB program space  
 85 or later including OS8.0  
 40MB RAM memory  
 32MB scratch disk space.

Mac OS

# InkJetPlus

# Photogize™

take your photo albums with you!

Windows and Macintosh are essential printing utilities for anyone that processes customer-created files. You can distribute both drivers to your customers who can use their own applications to create print-ready files that include all the required fonts and graphics. This valuable utility works with any application your customers may have running under Microsoft Windows 3.x, Windows 95/98/Me/2000 and NT4 and Macintosh OS7.6.1 to OS9 excluding OS8.0.

**RasterPlus Windows Edition**

The power of RasterPlus is available for Windows 95/98/Me/NT4/2000, perfect for cross-platform networking between Macs and PCs.

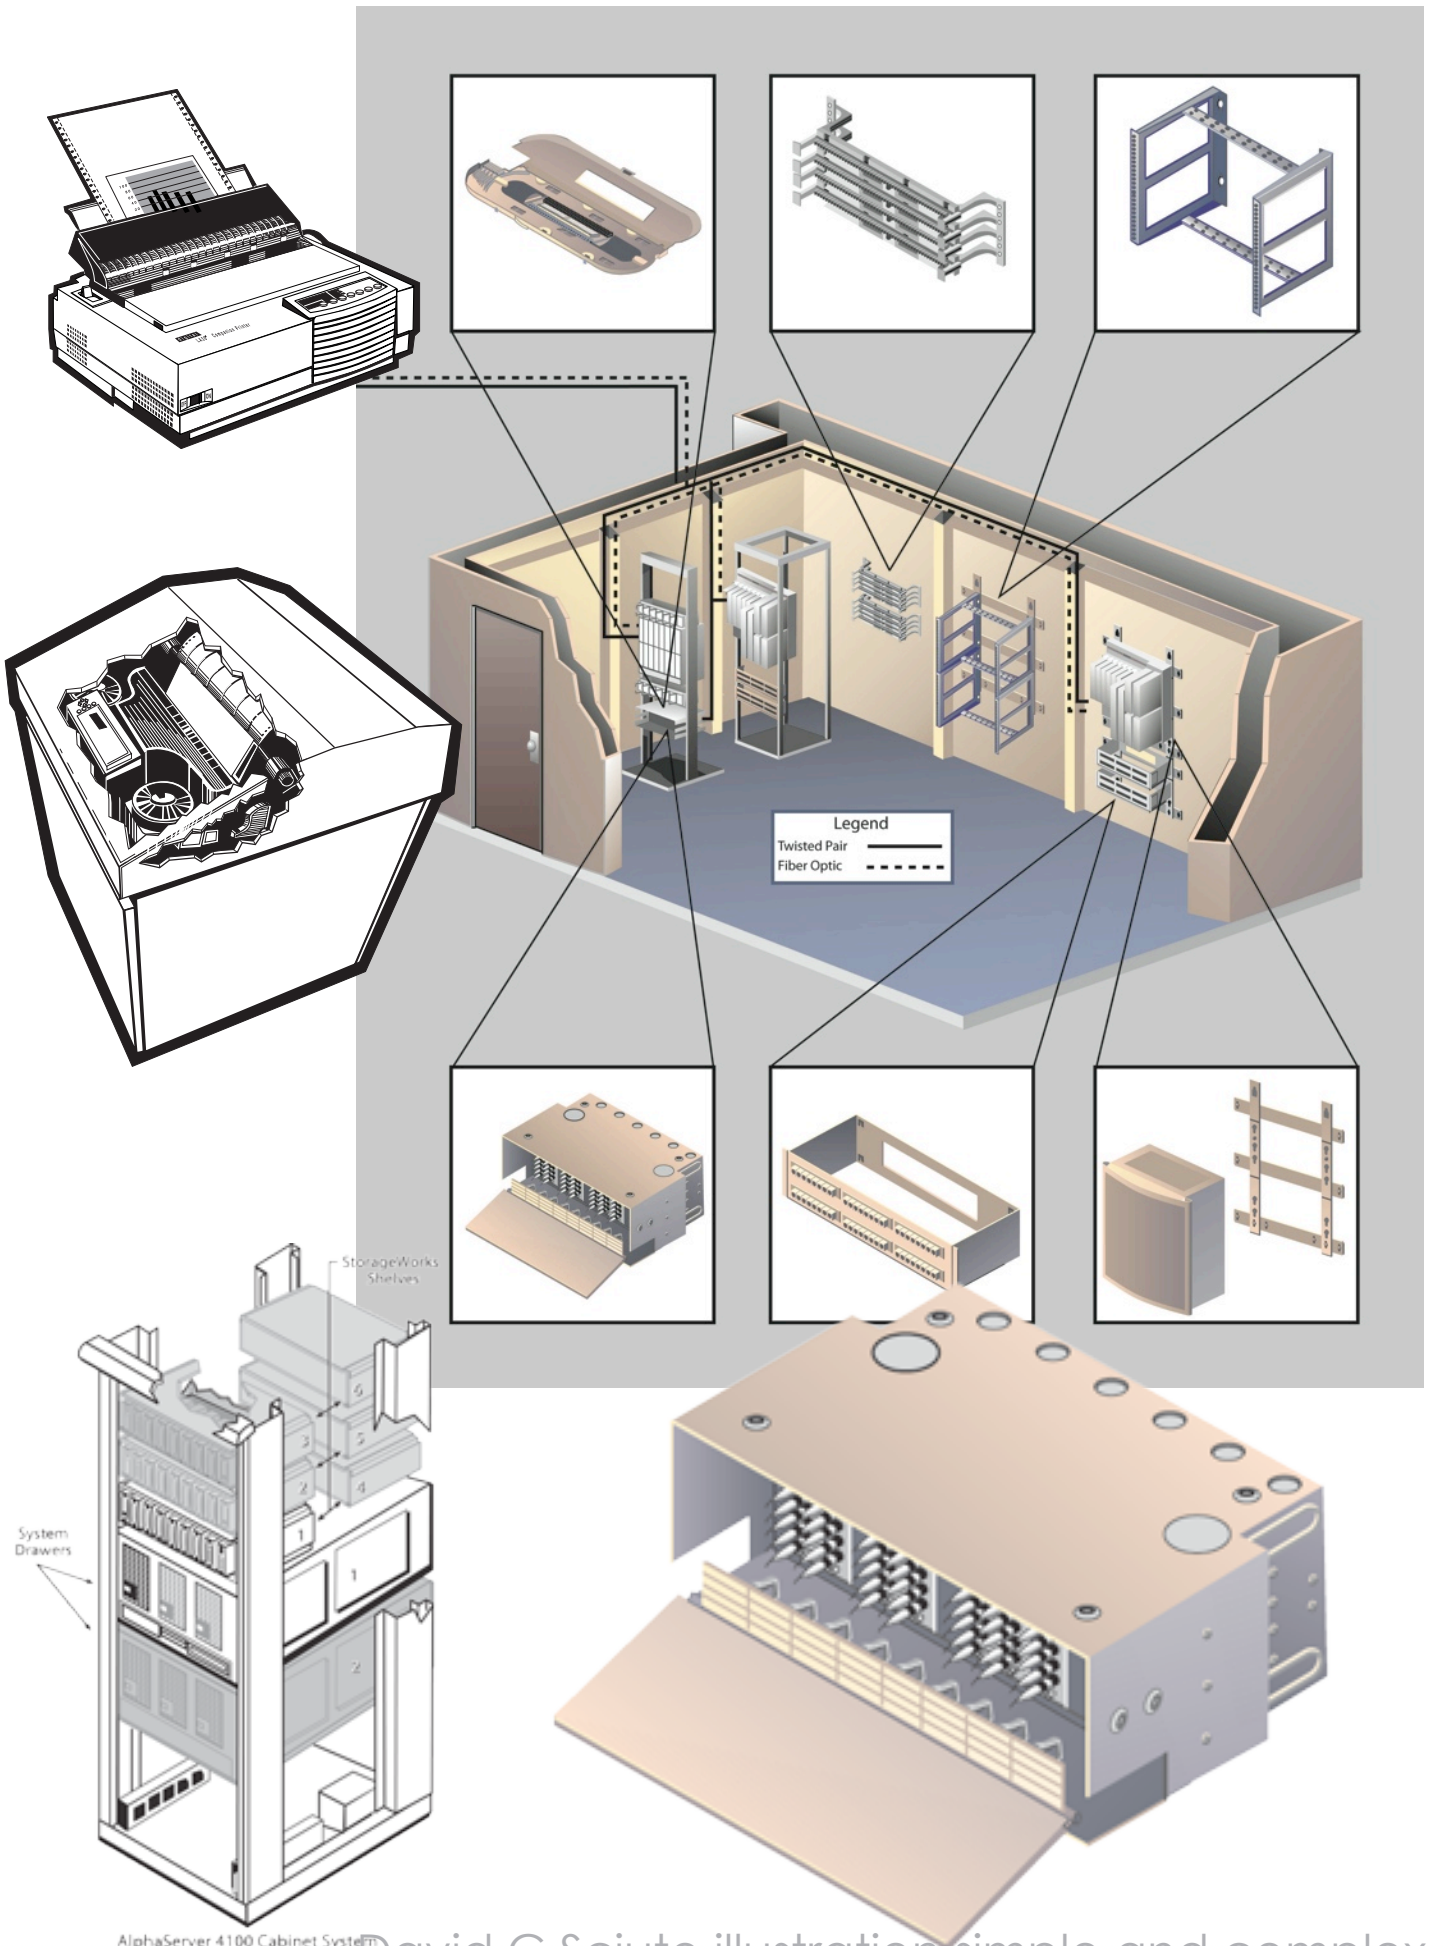

A free evaluation copy of RasterPlus Macintosh Edition that supports all devices is available at [www.graphix.com](http://www.graphix.com), or by contacting Graphix, Inc.
