

Macintosh Edition Summary

RasterPlus Macintosh Edition is designed to dramatically improve the print performance of color film recorders and photorealistic printers. The software is ideal for professional service bureaus, corporate imaging centers and desktop presenters who demand the most powerful print solution available for the Macintosh operating system.

RasterPlus provides full-time File-Print access from any Macintosh application even when RasterPlus isn't running! This integrated workflow makes RasterPlus the easiest software to use, maximizing print performance. You get accurate print previews, print editing, unattended schedule printing, hot folder networking and PostScript 3 quality output.

New Visual Print Workflow

RasterPlus Macintosh Edition has an all new Visual Print workflow which allows customers to track the status of all the jobs in the queue at a glance. With the 3-step visual print workflow, incoming files are placed in a Hold area where they can be previewed. RasterPlus features a true WYSIWYG high definition preview for a pixel-by-pixel view of your output before it is printed.

Once the files are approved, they are sent to the print engine that quickly renders the files to the device resolution. After printing, all files are collected in an Archive for future reference. Files can be dragged between panes to be reprinted, or dragged within the pane to change the order of the files in the queue.

New Multiple Queue Features

RasterPlus Macintosh Edition can support up to eight queues. Select multiple queues for the same device, or use RasterPlus with multiple devices. Each queue has independent preferences and options, so you can set up each queue for a particular type of job. The appropriate job properties are then automatically applied to every file in the queue.

Multiple workflow improvement have been made to increase productivity and save you valuable time. Not only can multiple queues be created, but all queues, queue preferences and settings are automatically saved when the queue is de-activated or when RasterPlus is closed. When RasterPlus is opened, the queues are ready to go. There's no need to create new queues each time jobs are processed.

The Impact Of RasterPlus®

RasterPlus software will dramatically improve the performance of your printer. Whether you have a color film recorder, wide format or photorealistic printer, RasterPlus gives you the right tools to make the winning print.

At the heart of RasterPlus is a PostScript 3 engine that quickly renders your files to deliver the very best output with smooth gradations between colors, razor sharp fonts and a wide range of special graphics effects. Powerful print server tools include accurate print previews, interactive print editing, drag-n-drop printing, and familiar file-printing from any application. Whether you are new to the game or a seasoned professional, you will be amazed at what RasterPlus will do for your output.

File Print Simplicity

RasterPlus is very easy to use. It lets you seamlessly print from any Windows or Macintosh application directly to your printer. When you File-Print from an application, RasterPlus automatically comes alive as a high performance print system with PostScript quality output. RasterPlus is also a native print server that enables your printers to be shared with others on the network. The host computer runs RasterPlus, while any Windows or Macintosh client can be given network print access. Remote workstations can even set their own preferences. Now anyone can use RasterPlus with the convenience of File-Print.

PostScript 3 Power

To quickly turn your prints into reality, RasterPlus features a world class PostScript 3 engine that is tuned for ultimate performance. RasterPlus is so fast that many jobs can be processed while printing, for speed that is up to 10 times faster than the competition.

Speed isn't everything if the results are not what you expect. RasterPlus uses an optimized processing system that prints color blends at the target device resolution for smooth gradations between colors. Laser-sharp fonts and lines are commonplace with RasterPlus because of proprietary halftone and anti-alias techniques. You can easily take advantage of the highest resolution graphics with RasterPlus to print special PostScript-only picture elements like embedded EPS files and PostScript fills. Simply select the RasterPlus printer from your application of choice and take full advantage of PostScript 3 for the very best output.

For Macintosh and Windows

Available on both the Macintosh and Windows platforms - the choice is yours. The Macintosh Edition is ideal for imaging professionals who need the best print software for the Macintosh OS. The Windows Edition is similar in operation but also includes full networking to all Windows and Macintosh client computers.
